Consideration:

The Pharmacy Australia Centre of Excellence (PACE) is currently housed on a site adjoining the Princess Alexandra Hospital in Woolloongabba. As part of the research and teaching facilities at the site they consume a large amount of nitrogen gas. Due to changes in the current Australian Standards surrounding the handling of gasses PACE is considering the cost of increased inspection requirements and modifications to their current gas storage tanks and facility. Due to cost increases in inspection requirement, modifications to the current gas storage tanks is required. The tank will be sited in an existing car space at the back of the facility adjacent to the rear loading dock.

Description:

The tank is stainless steel in construction and is supplied as a pallet/pad mounted unit. The tank as supplied, will connect to the house nitrogen supply which the school will extend from its gas store immediately adjacent to the tank. Two bollards will be installed for protection from vehicles.
